BlackDiamond® X8

Overview

Designed for large, virtualized data centers and clouds, the Extreme Networks® BlackDiamond X8 switch provides high density 10GbE and 40GbE. Furthermore, the BlackDiamond X8 was built with green operations in mind, resulting in low per port power consumption, which when combined with high density, can result in a lower Total Cost of Ownership.

With massive scalability, the BlackDiamond X8 offers 2.56Tbps per slot capacity and more than 20Tbps total switching capacity with 768 ports of line rate 10GbE or 192 ports of line rate 40GbE in a single chassis. All of this is offered in a relatively small footprint of only 14.5 RU, or one-third of a standard rack. The BlackDiamond X8 provides a standards-based “fabric in a box” which can eliminate expensive multiple-box and multi-tier solutions—along with their inter-device connectivity, uplink bandwidth and latency challenges.

The BlackDiamond X8 has the ability to automatically track and report 128,000 virtual machines (VMs) and automatically migrates Virtual Port Profiles (VPPs) in a touch-less manner through XNV™ (ExtremeXOS® Network Virtualization). Automated configuration and provisioning further contribute to simplicity of deployment and operation.

Key Features/Benefits

“Cloud-Scale” Switching

Designed from the ground up with the density, performance and capacity requirements of “cloud scale” data centers in mind, the BlackDiamond X8 provides 20.48Tbps total switching capacity, supporting up to 2,304 10GbE ports or up to 576 40GbE ports at wire-speed in a single seven-foot rack helping increase utilization of limited and expensive rack space. The BlackDiamond X8 fabric design uses an orthogonal direct mating system between interface and switch fabric modules, eliminating the performance bottleneck of backplane or midplane design. The BlackDiamond X8 can offer up to 2.56Tbps capacity per interface slot, allowing for future expansion to even higher port densities.
Technical Specifications

Low Latency
For larger scale low-latency deployments, the non-blocking 192 ports of 40GbE with cut-through switching can provide cost-effective means for a high-speed, open, “fabric in a box” when deployed as an End-of-Row/ Middle-of-Row solution.

Server Virtualization
The BlackDiamond X8, powered by the ExtremeXOS modular operating system, helps provide the foundation for virtualized applications. The BlackDiamond X8 switch includes virtualization features and scalability, supporting 128,000 Virtual Machines (VMs) per system or 384,000 VMs per rack by connecting up to 768 physical servers per system or 2,304 servers per rack through 10GbE.

The ExtremeXOS modular operating system runs on high-performance control plane hardware and helps simplify network deployment and operation with its VM-ready capabilities, such as XNV and Direct Attach™. Extreme Networks XNV allows auto-configuration of Virtual Port Profiles (VPP) to automatically detect and provision network policies in a virtualized data center in a hypervisor agnostic manner, providing simplicity in managing mobility in data centers. If a VM is moved from one physical server to the other, associated port policies on the connecting switch port are automatically moved, making an effortless change. The BlackDiamond X8 features redundant management modules with dual core Intel i7-based high-performance processors, communicating with each module in the system at gigabit speeds.

Reliable Delivery of Converged Storage Traffic
The BlackDiamond X8 supports Data Center Bridging (DCB) for reliable storage traffic. With IEEE complaint implementation of Priority Flow Control (PFC) and Enhanced Transmission Selection (ETS), storage traffic can be prioritized, queued separately and bandwidth guaranteed. This can provide a highly reliable and yet flexible and cost-effective network to provision storage services.

High Availability
The BlackDiamond X8 prevents single points of failure in hardware components through isolated control and data planes, fully redundant 1+1 management modules, N+1 redundancy for the switching fabric, and N+1 redundancy at the fan level combined with dynamic temperature control. For the power system, BlackDiamond X8 offers N+1 redundancy for power supply failure, and simultaneously supports N+N for power source redundancy.

The modular architecture of ExtremeXOS also contributes to the high availability of the system. ExtremeXOS software increases network availability by monitoring independent operating system processes in real time. If any of these processes become unresponsive, or stop running, they can be automatically restarted without impacting other processes. The BlackDiamond X8 runs a set of high availability protocols, including Multi-Switch Link Aggregation (MLAG) and Ethernet Automatic Protection Switching (EAPS), allowing the network to provide uninterrupted connectivity in the event of a failover, delivering a high level of resiliency and uptime. MLAG links between BlackDiamond X8 switches provide full active-active network-level redundancy. In most failover situations, inter-data center traffic does not drop and digital video feeds do not freeze or pixelize because EAPS allows the network to recover almost transparently from link failure (in less than 50 milliseconds in most cases).

Lower Operating Costs
The BlackDiamond X8 is designed to be efficient, with power consumption as low as 5.6 Watts per 10GbE and 22.5 Watts per 40GbE port. Front-to-back cooling helps data center network operators optimize the cooling environment. Fan speed is dynamically controlled and is set no higher than required. This allows efficient use of the cool air from the cold aisle and produces lower heat in the hot aisle.

 Extreme Networks Data Sheet: **BlackDiamond X8**

## Technical Specifications

### BlackDiamond X8 Series

#### General Specifications

##### Performance
- 20.48 Tbps data switching capacity, 30,476 MPPS forwarding rate
- Store-and-Forward and Cut-Through switching support
- 2.3 micro-second port-to-port latency (64-byte packet)

##### Density
- **10 GbE Port Density:**
  - 768 wire-speed 10GBASE-X SFP+ ports using 24-port 40 GbE I/O module
  - 384 wire-speed 10GBASE-X SFP+ ports using 48-port 10 GbE or 12-port 40 GbE I/O module
- **40 GbE Port Density:**
  - 192 wire-speed 40GBASE-X QSFP+ ports using 24-port 40 GbE I/O module
  - 96 wire-speed 40GBASE-X QSFP+ ports using 12-port 40 GbE I/O module

##### Scale
- **MAC Addresses:** 128K
- **IPv4 Host Addresses:** 16K, up to 28K per switch
- **IPv4 LPM Entries:** 16K
- **IPv6 Host Addresses:** 6K
- **IPv6 LPM Entries:** 8K
- **4,094 VLANs (Port, Protocol, IEEE 802.1Q)
- **9216 Byte maximum packet size (Jumbo Frame)
- **384 load sharing trunk groups, up to 16 members per trunk
- **2,048 ingress and 1,024 egress ACL rules per group of 24 10GbE or 6 40GbE ports
- **1,024 ingress ACL meters and 512 egress ACL meters per group of 24 10GbE or 6 40GbE ports
- **Ingress and egress bandwidth policing/limiting per flow/ACL
- **Egress bandwidth rate shaping per egress queue and per port
- **Rate Limiting granularity: 8 Kbps – 1Mbps

##### CPU, Memory
- Intel i7 Dual Core 2GHz
- 2GB ECC DDR3 SDRAM
- 1GB Compact Flash

##### LED Indicators
- Per port status LED for link/packet activity
- System Status LEDs: management, fan, fabric and interface modules and power supplies

Operating Specifications
- Operating Temperature Range: 0° C to 40° C (32° F to 104° F)
- Operating Humidity: 10% to 95% relative humidity, non-condensing
- Operational Altitude: up to 2000m (6561 feet)
- Operational Shock: 30 m/s² (3g), 11ms, 60 Shocks
- Operational Random Vibration: 3-500MHz @ 1.5g rms

Packaging and Storage Specifications
- Storage/Transportation Temperature: -40° C to 70° C (-40°F to 158°F)
- Storage and Transportation Humidity: 10% to 93% RH
- Package Shock (Half Sine):
  - < 50 kg 180 m/s² (10 g), 6 ms, 600 shocks, modules
  - > 50 kg 100 m/s² (6 g), 11 ms, 600 shocks, chassis
- Package Sine Vibration: 5-62 Hz @ Velocity 5mm/s, 62-500 Hz @ 0.2g
- Package Random Vibration: 5-20Hz @ ASD=1.0 & 20-200Hz @ 3dB/octave
- Package drop height
  - @ 39.5” <22 lb (10 kg) modules
  - @ 11.8” <110 lb (50 kg) chassis

Regulatory/Safety
North American Safety
- cULus 60950-1:2007 2nd Ed., Listed Device (U.S.)
- CSA 22.2#60950-1-03 1st Ed. 2006-07 (Canada)
- Complies with FCC 21CFR Chapter1, Subchapter J (U.S. Laser Safety)

Operational and Transportation Standards
- EN/ETSI 300 019-2-1 v2.3 (2008-04) – Class 1.2 Storage
- EN/ETSI 300 019-2-2 v2.2.1 – Class 2.3 Transportation
- EN/ETSI 300 019-2-3 v2.2.2 – Class 3.1e Operational
- EN/ETSI 300 753 v1.21 (2009-7) – Acoustic Noise
- ASTM D3580 Random Vibration Unpackaged 1.5G

Fan and Acoustic Noise
- Sound pressure for comparison to legacy standards
  - Low Speed: 60.3 dB(A) per ISO 7779:2010
  - Medium Speed: 66.0 dB(A) per ISO 7779:2010
  - High Speed: 82.3 dB(A) per ISO 7779:2010
- Sound power in accordance with EN 300 753 v1.3.1 (2011-11)
  - Low Speed: 72.0 dB(A) per ISO 3744:2010
  - Medium Speed: 78.0 dB(A) per ISO 3744:2010
  - High Speed: 94.4 dB(A) per ISO 3744:2010
- Declared sound power in accordance with EN 300 753 v1.3.1 (2011-11)
  - Low Speed: 7.5 dB(A) in accordance with ISO 9296:2010

Power Supply
- Rated Inputs:
  - Low Range: 100-120VAC, 60/50 Hz, 13 A max each power supply
  - High Range: 200-240VAC, 50/60 Hz, 13 A max each power supply
- Input Ranges:
  - Low Range: 90-132VAC, 47-63 Hz
  - High Range: 185-264VAC, 47-63 Hz
- Power supply input socket IEC 320 C20
- Power cord input plug IEC 320 C19
- Power cord sets up to 2m (6.5ft) length require minimum 16 AWG (1.0 mm²) copper stranded wire
- Power cord sets greater than 2m (6.5ft) length require minimum 14 AWG (1.25 mm²) copper stranded wire
  (The power supply cord-set wall plug must be appropriately rated and approved for the country of installation)
- Efficiency 90% typical at full load
- DC voltage output range: 475 to 485 Vdc
- Nominal DC output:
  - Low Range: 48 Vdc, 25 A maximum each PSU
  - High Range: 48 Vdc, 50 A maximum each PSU
- DC output power:
  - 2500W @ high range for one PSU (See manual for more than one PS)
  - 1250W @ low range for one PSU (See manual for more than one PS)

Power Consumption
- Worst case power consumption and heat load (With 10Tbps SFM):
  - 4,436 W at output of power supplies
  - 4,929 W at input of power supplies
  - 16,817 BTU/Hour total heat load
- Worst case power consumption and thermal (With 20Tbps SFM):
  - 6,532 W at output of power supplies
  - 7,258 W at input of power supplies
  - 24,764 BTU/Hour total heat load
- Typical power consumption: *
  - 5.6 W per 10GbE, 22.5 W per 40GbE

*Per-port power is based on ATIS calculation per Lippis test report.
ExtremeXOS Supported Protocols

The BlackDiamond X8 switch supports ExtremeXOS version 15.1 or later. Supported protocols and features can be reviewed in the latest ExtremeXOS data sheet available at: http://extremenetworks.com/go/xos
